

CR110 REFRIGERATION CONTROLLER

Microprocessor Controller

The CR110 is an advanced microprocessor driven refrigeration controller. A Controller designed to provide optimum system efficiency, superior compressor and system protection, and advanced monitoring and control capabilities. The Heart of the CR110 is the real time system analysis coupled with the ability to respond to dynamic changes in the load and ambient conditions.

- Temperature Control— Utilizing a PID Loop sensing Room and Ambient Temperatures
- Compressor Control— Fully Redundant enabling 100% Back Up
- Condenser Control— Utilizing a 4-20ma signal to deliver the most efficient operation during Low and High Ambient Conditions
- Evaporator Control— Low Pressure Freeze Protection and Liquid Line Solenoid Control
- Evaporator Fan Control— Prevents system from operating if Evaporator Fans are shut off.
- User Interface— panel mount or portable handheld models available.
- Remote Monitoring and Control Capability- Download to Web, Handheld Interface, Laptop, or Wireless PDA

When Keeping Cool is Everything™
